

Philippe Malo

Full stack web developer

CONTACT

me@philippemalo.dev

Mascouche, Quebec

philippemalo.dev

SKILLS

BACK-END

PHP, Symfony, Laravel, Twig

FRONT-END

JavaScript, TypeScript, Vue.js, Nuxt, Astro, HTML, CSS, SCSS, Tailwind CSS

DATABASES

MySQL, MariaDB

CMS

Payload CMS, DatoCMS, WordPress

TOOLING

Docker, Git, mise-en-place, npm, yarn, bun, Gulp, Webpack Encore

PRACTICES

Debugging and log analysis, application security and WordPress hardening, REST and GraphQL API consumption, semantic HTML and accessibility, technical documentation

FAMILIAR WITH

React, Node.js, MongoDB, AWS

LANGUAGES

French rwX read, written, spoken

English rwX read, written, spoken

BILINGUAL

PROFILE

Full stack web developer with over three years of experience on **PHP / Symfony, Nuxt and WordPress** applications. I enjoy shipping a feature end to end as much as improving the tooling behind it, like Docker environments, unified build pipelines and team documentation. In production, I quickly trace a problem back to its source from the logs. I favour native solutions and as few dependencies as possible, with CSS for presentation and JavaScript for behaviour, because that is what stays maintainable years later. I am looking for a team that builds its product for the long run, where code quality and continuous learning are part of the job.

PROFESSIONAL EXPERIENCE

APCHQ

May 2024 – August 2026 · Montreal

Full stack web developer Since January 2026 – promotion

Front-end developer / integrator May 2024 – January 2026

A fleet of nearly ten websites, with a single back-end developer to maintain them. Hired for front-end integration, I gradually took on part of the back-end work.

- **Rebuilt a site from scratch on Nuxt and Payload CMS**, including the architecture, content modelling, custom content blocks and integration. **Migrated over 800 articles from WordPress** using a content transformation script, with on-the-fly WebP image generation through Nuxt Image.
- **Single form for eight pages of a Symfony site**, replacing as many duplicated tables and controller methods with one table and one method, configurable per page (fields, validation rules, default values), sending emails to both the relevant department and the requester.
- **Cut local reload time from 20-30 seconds down to 1-2 seconds** by restructuring the Docker setup of the team's projects, removing the main bottleneck in day-to-day development.
- **Unified development tooling with mise-en-place**, giving every project the same set of commands despite mixed build pipelines (Gulp, Webpack Encore and others).
- **Hardened WordPress site security**, working with the external security and server management providers.
- Technical documentation for the web team, including a complete development environment setup guide, per-site update procedures and templates.
- Feature development in PHP and Twig, JavaScript and TypeScript across Symfony, Nuxt and WordPress sites, with GraphQL queries to DatoCMS and Payload CMS, and design and querying of MySQL, MariaDB and MongoDB databases.

Tollé Agence Web

2023 · Terrebonne

Web operations developer

- PHP script exporting WordPress articles to iterweb in XML format.
- Implemented CookieYes consent banners and additional features on existing sites, providing direct client support.

Riopel Consultant Informatique

2023 · Saint-Jérôme

Web development internship

- Real-time power grid outage map, fed by REST API requests.
- Real-time dashboard tracking quarantined files across the company's computers, through JSON-RPC requests.
- Additional control panel in an existing Laravel architecture, and Twitter authentication to monitor accounts the company tracks.

Laboratoire dentaire Malo & associés inc.

2003 – 2020 · Terrebonne

Vice-president

- Ran the operations of a dental prosthetics lab for seventeen years, including the manufacturing of metal partial dentures, inventory management and customer service.

EDUCATION

AEC (college diploma) – Website design and programming

June 2022 – October 2023 · Montreal

Collège de Maisonneuve
